                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a peptide fragment of a novel bovine pituitary derived ligand corresponding to amino acid residues 23 to 53 of the sequence in AAW31368 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a centrain nervous system modulator or a pancreatic function modulator.

This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, clisturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hypercholesterolaemia, hyperdiyocridaemia, hyperlipidaemia, hyperlipidaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, anylotrophic lateral sclerosis, acute myocardial infarction, spinocerebellar degeneration, bone fracture, transient brain ischaemia, amylotrophic lateral sclerosis, acute myoracial infarction, spinocerebellar degeneration, bone fracture, transient brain ischaemia, amylotrophic lateral sclerosis, acute mydor oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus capable contains the binding activity of the ligand thus
                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bovine pituitary-derived ligand; modulation; prolactin secretion; G protein-coupled receptor; GPCR; hypoovarianism; gonecyst cacogenesis; menopausal syndrome; euthyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Porbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia.
                                        Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gape

prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Probes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                      The present sequence represents a bovine pituitary-derived ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GCCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,
                                                              Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cleavage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Producing a 19P2 pituitary G protein receptor ligand - by cleava, of a fusion protein, useful for preventing and treating dementia, breast cancer, renal failure and autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             19P2 ligand, G protein coupled receptor; pituitary; prolactin releasing peptide; cattle; dementia; breast cancer;

                                                                                                                                                                                   high doses) prolactin secretion-inhibiting properties.

High doses) prolactin secretion-inhibiting properties.

Used in the treatment and prevention of various diseases including: senile dementia, cerebrovascular dementia, and dementia associated with: genealogical disorders (e.g. Alaheimer's disease, Parkinson's disease, Pick's disease, Huntington's disease), infectious diseases.

C. Guerarfeld-Jakob's), endocrine or metabolic disease or toxicosis (e.g. hypothyroidism, vitamin B12 deficiency, alcoholism, intoxication by drugs, metal and organic compounds), tumourigenic continuation by drugs, metal and organic compounds), tumourigenic subarachnoidal heamorihage, and other types of demential, depression, hyperactive child syndrome (microencephalopathy) and disturbance of consciousness. It is also useful for prevention and treatment of disease associated with prolactin hypo and hypersecretion respectively, including: hypothrocactinaemia, pituitary adenoma, breast cancer, infertility, impotence and autoimmum disease.

C. (hypersecretion disorders), and seminal vesicle hypoplasia, osteoporosis, menopausal syndrome and renal failure (hyposecretion reagent for study of the prolactin secretory function or as a test
                      This is the amino acid sequence.

protein-coupled receptor ligand 19P2L. A method suitable for commercial high-level production of 19P2L comprises expressing the ligand in host cells as a recombinant fusion protein e.g. with human basic fibroblast growth factor (see AAV83792-93) that has been modified to include an N-terminal cysteine residue. The 11gand is released from the fusion by cyanylation followed by ammonolysis. 19P2L has prolactin secretion-stimulating and (at ammonolysis. 19P2L has prolactin factor inhibiting properties. It can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated CC which is a ligand for the G-protein coupled orphan receptor designated CFR10 (human) or URF-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant containing the ligand polypeptide. The ligand polypeptide and can be used to screen for agents that modulate binding of the CC function of the ptulitary, central nervous system, pancreas and other clissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, e.g. to treat senile demential Alzheimer's, Parkinson's or Huntington's disease; schizophrenia; disorders of growth hormone secretion; cancer; rheumatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to disease, for drug screening and as source of cell lines. The ligand colypeptide expressing genes, as models of disease, for drug screening and as source of cell lines. The ligand cantisers, in drug development; for gene therapy and to develop transgenic animals. The present sequence represents a bovine genome-derived ligand colypeptide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   treatment; disease; pain; atonic bleeding; uterine receptor protein; caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                           ö
                                                                             This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the g protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a bovine peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory
Physiologically-active polypeptide recognized as ligand by G
protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative Sequences AAX49290-302 represent peptide fragments of the 19P2 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present invention relates to a method of screening for compounds for promoting wakefulness or sleep in a mammal. The method involves administering a prolactin releasing peptide (PrRP) receptor (GPR10) agonist or antagonist respectively and determining the ability of the compound to promote wakefulness or sleep. The compounds identified compound to promote wakefulness or sleep. The compounds identified associated with absence seizures and in promoting wakefulness and sleep in individuals having sleep disorders such as insomnia and narcolepsy. Prep receptor agonists may be used to treat common disorders which lead to sleepiness, e.g. sleep appose, narcolepsy, idiopathic hypersomnia and psychogenic hypersomnia. PrRP receptor antagonists are useful for promoting sleep and for treating insomnia such as adjustment sleep disorder and psychophysiologic insomnia. The present sequence is bovine prRP-31 peptide.
Screening for compounds useful for promoting wakefulness or sleep, and for treating sleeping disorders, e.g. insomnia, hypersomnia or sleep apnea, comprises administering a prolactin releasing peptide agonist or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide production; low-molecular peptide; KiSS-1; GPR8 ligand;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide production by gene recombination associated peptide #9.

                                                                                                                                                           ሯ
                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                          The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptides e.g. KiSS-1 peptide and GRP8 ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a
                                                                            Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites -

This sequence represents a peptide fragment of a novel bovine pituitary derived ligand corresponding to amino acid residues 23 to 54 of the sequence in AAW31368 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. The second have specific applications as a prophylactic or the rapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, soffizophrenia, trauma, hypercholesterolaemia, hyperglyceridaemia, hyperlipidaemia, trauma, hyperprolactinaemia, disbetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, disbetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, disbetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, rematcid arthritis, spinal injury, transient brain ischaemia, amylotrophic lateral sclerosis, acute
precursor protein. The method is for producing (low-molecular) peptides egg. K188-1 peptide and GPRB ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, epptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         G protein-coupled receptor; ligand binding; pharmaceutical;

disease, for drug screening and as source of cell lines. The ligand polypeptide DNA is used as a source of probes and primers; to identify related sequences; in receptor-binding assays; for production of Ab and antisera; in drug development; for gene therapy and to develop transgenic animals. The present sequence represents a bovine genome-derived ligand polypeptide fragment which is similar to the murine ligand-polypeptide.

The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GPRIO (human) or URLA: (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant ligand polypeptide. The ligand polypeptide, and its fragments, modulate ligand polypeptide. The ligand polypeptide is sorient for agents that modulate binding of the polypeptide to the receptor; to agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, e.g. to treat senile dementia; Alzhehmer's, Parkinson's or Huntington's diseases; Creuzfeld-Jakob disease; poisoning by heavy metals or drugs; diabetes; schizophrenia; disorders of growth hormone secretion; cancer; rheumatoid arthritis, epilepsy and many others, also to improve postroperative nutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of
                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pituitary-derived ligand polypeptide; G-protein coupled orphan receptor; GPR10; UHR-1; modulator; pituitary; central nervous system; pancreas; tissue; screen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; drug; Creutzfeld-Jakob disease; polsoning; schizophrenia; growth hormone; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor;
myocardial infarction, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis, aethma, epilepsy, infertility and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.

                                                                                                                                       Bovine, oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow; caesarean section; artificial fertilization; galactostasis; goat; pig;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a bovine peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 32;

The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadremocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the
                                                                                                                                                                                                                                     Cow, corticotrophin releasing hormone, CRH; G protein receptor ligand; analgesic; hyperaldosteronism; hypercortisolaemia; hypoadrenocorticism; Addison's disease; adrenal gland hyperfunction; obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 32;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                P81278

Pept. 83:1-10(1999).
-!- FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPR10. May stimulate lactotrophs directly to secrete PRL.
                                                                                                                                            Rattus norvegicus (Rat).

Sialidase 3 (Rel. 41, Membrane sialidase)
(N-acetyl-alpha-neuraminidase 3).
                                                                                                                                                                                                                                                                                                                                                                                                                                       glycoconjugates.

GrantyTic Activity: Hydrolysis of alpha-(2->8)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.

SINGELLUIAR LOCATION: Membrane-associated (By similarity).

TISSUE SPECIFICITY: Expressed in brain.

SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDROLAGES.
SIMILARITY: Contains 3 BNR repeats.
                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                              ŏ

"Cloning, expression, and chromosomal mapping of a human ganglioside
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GTARLYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal stalic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.

--- SUBCENLIARA LOCATION: Membrane-associated
---- SUBCENLIARA LOCATION: Membrane-associated, adrenal gland and thymus, followed by pancreas, liver, heart and adrenal gland and thymus, followed by pancreas, liver, heart and thymus "Weakly expressed in kidney, placenta, brain and lung.
---- HISCELLANEOUS: Optimum pH is 3.8.
---- SIMILARITY: CONTAINS 3 BNR repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Monti B., Bassi M.T., Papini N., Riboni M., Manzoni M., Venerando B., Croci G., Preti A., Ballabio A., Tettamanti G., Borsani G., **Identification and expression of NBU3, a novel human sialidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -i- FUNCTION: Plays a role in modulating the ganglioside content of the lipid bilayer at the level of membrane-bound sialyl

                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mesorhizobium loti.";

DNA Res. 7:331-338(2000).

-!- FUNCTION: The UVLABC repair system catalyzes the recognition and processing of DNA lesions. UvrA is an ATPase and a DNA-binding processing of DNA lesions. On complex composed of 2 uvrA and 2 uvrB subunits scans DNA for abnormalities. When the presence of lesion has been verified by uvrB, the uvrA molecules dissociate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              28-FEB-2003 (Rel. 41, Created)

-I- FUNCTION: The UvrABC repair system catalyzes the recognition and processing of DNA lesions. UvrA is an ATPase and a DNA-binding protein. A damage recognition complex composed of 2 uvrA and 2 uvrB subunits scans DNA for abnormalities. When the presence of a lesion has been verified by uvrB, the uvrA molecules dissociate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (By similarity).
--- SUBUNIT: Forms a heterotetramer with uvrB during the search for lesions (By similarity).
--- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
--- SUBCELLULAR LOCATION: THE ABC TRANSPORTER FAMILY. UVRA SUBFAMILY.

Новоуа М; Pujii R, Fukusumi S, Habata Y, Hinuma S, Kawamata Y, Kitada C, Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy

WPI; 1999-105614/09

Claim 3, Page 153; 241pp; English

```
This sequence represents a peptide fragment from a novel rat type
ligand polypeptide corresponding to amino acid residues 22 to 52 of the
sequence represented in AAW31383 and is used in an assay) to monitor
ligand binding to the G protein-coupled receptor protein. Pharmaceutical
compositions containing this ligand may be used as a pituitary function
modulator, a central nervous system modulator or a pancreatic function
compositions containing this ligand may be used as a pituitary function
modulator. This ligand could have specific applications as a
prophylactic or therapeutic agent for dementia, depression, hyperkinetic
crauma, growth hormone secretory disease, hyper- and polyphagia,
trauma, protein hormone secretory disease, hyper- and polyphagia,
hyperliphdaemia, hypercholesterolaemia, hyperglyceridaemia,
hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease,
hyper is syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury,
transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis,
acute myocardial infarction, infertility, spinocerebellar degeneration,
cotte myocardial infarction, infertility, spinocerebellar degeneration,
oligogalactia. Assays can also be developed to screen compounds which are
capable of altering the binding activity of the ligand affecting
activation of the G protein-coupled receptor protein.
                                                                            Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 31,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 174; DB 18;

```

The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a 6 protein-coupled receptor (GPCR) controlled to the secretion of the secretion can be used for treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal syndrome, enthyroid or hypometabolism. They can by used for promoting syndrome, enthyroid or hypometabolism. They can by used for promoting syndrome, enthyroid or hypometabolism. They can by used for promoting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmenlopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorthea, galactorrhea, cromegaly, Chlari-Frommel syndrome, sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriccarcinoma, hydatid mole, irruption mole, abortion, unthirity fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.

Producing a 19P2 pituitary G protein receptor ligand - by cleavage of a fusion protein, useful for preventing and treating dementia, breast cancer, renal failure and autoimmune disease
                                                                                                                                                   19P2 ligand, G protein coupled receptor, pituitary, prolactin releasing peptide, rat, dementia, breast cancer,
                                                                                                                                                                                                                                                                                                                                   Tanaka Y;

                            This is the amino acid sequence or the rat piturary of protein-coupled receptor ligand 1972L. A method suitable for commercial high-level production of 1972L comprises expressing the ligand in host cells as a recombinant fusion protein e.g. with human basic fibroblast growth factor (see AANS194-95) that has been modified to include an N-terminal cysteine residue. The ligand is released from the fusion by cyanylation followed by ammonolysis. 1972L has prolactin secretion-inhibiting properties. It can be used in the treatment and prevention of various diseases including senile dementia, cerebrovascular dementia, and dementia associated with; genealogical disease, Huntington's disease, infectious disease, cerebrovascular dementia, and dementia associated with; genealogical disease, Huntington's disease), infectious disease, coxicosis (e.g. Arabeimer's disease, proxicosis (e.g. hypothyroidism, vitamin Bl2 deficiency, alcoholism, intoxication by drugs, metal and organic compounds), tumourigenic subarachnoidal heamorrhage, and other types of dementia, depression, hyperactive child syndrome (microencephalopathy) and disturbance of consciousness. It is also useful for prevention and treatment of disease associated with prolactin hype and hypersecretion respectively, including: hyperprolactinamal, pituitary adenoma, breast cancer, infertility, impotence and autoimmune disease

(Mypersecretion disorders), and seminal vesicle hypoplasia, osteoporosis, menopausal syndrome and renal failure (hyposecretion reagent for grady of the proplactin secretory function or as a test and a seminal reagences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pituitary-derived ligand polypeptide, G-protein coupled orphan receptor;

This represents the matured murine pituitary-derived ligand polypeptide sequence. The polypeptide is a ligand for the G-protein coupled orphan receptor designated GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the modulate binding of the polypeptide to the receptor; to quantify the modulate binding of the polypeptide and to raise antibodies. They may also be used therapeutically, e.g. to treat senile dementia; Alzheimer's poisoning by heavy metals or drugs; diabetes; schizophrenia; disorders of growth hormone secretion; cancer; rheumatoid arthritis, epilepsy and many others, also to improve post-operative nutritional status and as contest, also to improve post-operative nutritional status and as the mutein are used to study the function of the polypeptide encoding DNA or its mutein are used to study the function of the polypeptide encoding on and primers; to identify related sequences; in receptor-binding assays; for production of Ab and antisers; in drug development; for gene therapy, and to develop transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GPRIO; UHR-1; modulaTor; pituitary; central nervous system; pancreas; tissue; screen; therapeutic; binding; senile dementia; ligand; murine; Alabelmer's disease; Parkinson's disease; huntington's disease; drug; Creutzfeld-Jakob disease; poisoning; schizophrenia; growth hormone; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor; gene therapy; transgenic animal; epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pituitary-derived ligand polypeptide; G-protein coupled orphan receptor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                  New polypeptide ligand for orphan G protein coupled receptors - for treating disorders of central nervous system, pituitary and pancreas, and for drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GPR10 (human) or UHR-11 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other crises and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to rasks antibodies. They may also be used therapeutically, e.g. to treat senile dementia; Alzheimer's Parkinson's or Huntington's disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; cheuratoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes as models of disease, for drug screening and as source of cell lines. The ligand polypeptide coperative mutaits as a source of probes and primers; to identify criatsers; in drug development; for gene therapy and to develop criatisera; in drug development, for gene therapy and to develop artisera; in drug developments APM95174 to AAM95178 represent antigenic principles which can be used for the preparation of anti-ligand polypeptide production of the preparation of anti-ligand polypeptide.

The invention relates to a method for identifying compounds useful for modulating body weight. The method comprises cell-free and/or cell-based
                                                                                                                    This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying modulators of body weight by a combination of a cell-free or cell-based assay to identify modulators of GPR10, followed by an in vivo assay for the compounds effect on e.g. feeding behavior -
             Physiologically-active polypeptide recognized as ligand by G
protein-coupled receptor protein, for promoting secretion of oxytocin,
as drugs for diseases relating to oxytocin secretion and in veterinary
medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Prolactin-releasing peptide; PTRP; GPR10; G protein-coupled receptor; feeding behaviour; food intake; modulation; antagonist; anorectic; obesity; agonist; cachexia.

assays that identify compounds which bind to and/or activate or inhibit the activity of GPR10, a G protein-coupled receptor. These assays are then followed by an in vivo assay of the effect of the compound on feeding behaviour, body weight or metabolic rate in a mammal. Prolactinreleasing peptide (PrRP; AAY87504) is a ligand of GPR10. Binding of PrRP to GPR10 stimulates a signal transduction cascade, which results in an increase in food intake. Compounds identified using the method of the invention are useful for the modulation of body weight. Antagonists of GPR10 can be used to treat obesity, while GRR10 agonists can be used to treat cachexia. The present sequence represents rat PrRP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   its derivative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory electronism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative Sequences AAX49290-302 represent peptide fragments of the 19P2 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibody; 19P2 ligand; diagnosis; prolactin secretion; regulatory mechanism; central nervous system; pancreatic.

This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperallosteronism,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hypercortisolaemia, secondary or chronic hypoadremocorticism, Addison's disease (including boreadom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ሯ
                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a modified therapeutic peptide (I) comportsing a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half infa and specificity as bonding to large molecules decreases the action of peptidases to increase length of activity (half intracellular uptake and interference with physiological processes. ABB90829 to ABB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rat; wakefulness; sleep disorder; prolactin releasing peptide receptor;
